Due Date: 15.9.20, 17.9.20

Exercise 4: FILE TRANSFER USING TCP

Transfer a file from server to client using TCP socket programming

Client Side

Client requests for a File from the server.

Client receives the file through the TCP socket and save it in a new location.

Server Side

Server opens the file and transfers it through the socket.

Sample Input Output

Client Side

Enter the path of file: Desktop\File.txt

File Transferred.

Save the file in path: Desktop\FileTransfer\newfile.txt

Server Side

Waiting for client

File to be transferred is Desktop\File.txt

File Transferred
